

WHAT YOU VALUE
DESERVES TO BE
CARED FOR

YOUR TIMEPIECES DESERVE TO BE LOOKED AFTER

It is the thought that counts...

It is acknowledged that even complicated automatic mechanical watches operate on a simple principle: the movements of the person who is wearing the watch allow the oscillating weight to rotate and, in doing so, to rewind the movement. As long as the watch is being worn, the movement rewinds automatically. If the watch is not worn, the power reserve - 40 hours in most cases - runs out and the movement stops. If the stoppage time is prolonged, the lubricants can dry out, which in turn can cause the gear train to seize so altering the good functioning of the watch.

Complication: attentions...

The mechanism of the perpetual calendar, for example, has a mechanical memory that allows it to automatically go from 28th, 30th or 31st of the month to the 1st of the following month. The same applies to leap years, that is to say every four years; the date passes from 29 February to 1 March by "jumping". The only manual adjustment required must be made during the years 2100 and 2400, which exceptionally are non-leap years. If the movement stops, restarting the mechanism requires an in-depth knowledge of watchmaking. That is why a complicated watch must always be in motion.

Maintenance and transmission

The precise and regular maintenance of your timepiece makes it possible to protect the investment it represents in a possible transmission perspective.

PROTECT. MAINTAIN. ENHANCE.

In order to preserve the value you attach to your timepiece, it is advisable to conjugate three verbs in the present tense.

Protect

When a timepiece is not worn, the easiest way to protect it from shocks, scratches, water, dust, etc. is its case or its watch winder. Regular cleaning is also a good protection against daily aggression or the passage of time.

Maintain

If the watch is not worn regularly, it is advisable to place the timepiece in a watch winder. In addition, a regular inspection of the seal by an authorised watchmaker guarantees it functions properly and maintains its value.

Enhance

Sophisticated system of great precision, an automatic watch is also a beautiful piece of work that we like to wear and admire. Apart from your wrist, what better place to highlight it than a watch winder?

The watch winder: it turns heads

At home or on the move, placing your automatic watch in a watch winder makes it possible to protect it, to maintain it by keeping it always on time and to enhance it. This is all the more justified if the owner owns several watches or watches with complications. Some programmable watch winders allow to set the winding time and the number of revolutions, the speed and the direction of rotation for an optimal setting according to the timepiece.

Thanks to invented, proven and recognised technologies, SwissKubiK offers a wide range of watch winders designed, developed and assembled in Switzerland.

Swiss Made: the incontestable quality

All SwissKubiK watch winders meet the requirements of the Swiss Made label. Since the creation of the company in 2007, our products have been designed and assembled by hand in Switzerland, in our manufacture of Givisiez, three kilometres from Fribourg, in the canton of the same name.

Engraved on the back of each case, this simple mention is the guarantee of an immutable requirement and a flawless quality. It also reflects this clever marriage of respect for tradition and the great capacity for innovation that Switzerland can show.

Watch winders for connoisseurs

Our watch winders meet the highest standards, so as to better meet those of a clientele of connoisseurs.

Therefore, each watch winder features:

- a motor without magnetism,
- an ultra-silent system,
- a programming system (on Masterbox and Travelbox models) making it possible to define the number of revolutions, the speed and the direction of rotation according to the models,
- the counting of the revolutions,
- the repositioning of the watch at 12 o'clock after each rotation session so that the watch is always in the "case" position,
- an exceptional autonomy of approximately three years on batteries, thanks to low-energy motor and electronic circuit (1.2 mA).

In addition, our watch winders are particularly appreciated for:

- their irreproachable quality, thanks to an assembly being entirely carried out by hand by our teams and a quality control carried out on each piece,
- their unique mounting system allowing to replace in one gesture the external structure, to change style at will, but also to modify the mechanical parts,
- their reduced and optimised size - 12 x 12 cm for a Startbox or 10 x 10 cm for a Masterbox - for convenient storage in a safe,
- their timeless design that comes in multiple variations of materials and colours.

Your timepiece merits a made-to-measure watch winder

To meet all the requirements, the SwissKubiK watch winders are available in a wide range of materials - leather, with or without stitching, aluminium, wood, carbon, etc. -, colours and combinations of watch winders.

The customisation includes the printing of patterns, logos or photos on any type of material, whether UV, hot stamping or laser engraving, and this on the entire range.

R&D: the origin of excellence

Since its creation, SwissKubiK has continuously improved its system. Today, we present our sixth generation of rotation system, which includes both the mechanical and the electronic parts, that is to say the motor and the programming circuit.

Innovation is essential to create unique products that meet the needs of a demanding private clientele. In the same way, we collaborate with more than twenty watchmaking companies for which we integrate our motors in their watch winders.

Strong ecological awareness

In compliance with the Swiss Made quality label and in order to limit its carbon footprint, all SwissKubiK suppliers have been selected within a radius of 50 kilometres around its manufacture of Givisiez (FR) factory.

A simple idea

2007. SwissKubiK was created in Geneva, Switzerland, with a desire to innovate in the field of automatic watch winding by proposing small and autonomous watch winders.

Traditional craftsmanship

The first watch winders were entirely made by hand in the purest Swiss tradition and were manufactured in the same year (2007).

Cutting-edge technology

The SwissKubiK watch winders are equipped with an ultra-silent, non-magnetic, energy-saving motor - three years of autonomy - and programmable for the Masterbox and Travelbox range.

100% Swiss Made

Designed, developed and assembled in Switzerland, they meet the requirements of the Swiss Made label, synonymous with durability, reliability, quality and precision, to sum up "excellence".

Made-to-measure watch winders

Leather, wood, aluminium, stitching, engravings, made-to-measure: the SwissKubiK watch winders are available in a great variety of materials, colours and finishings for a unique experience. They are available in single or multiple versions – for up to 12 watches - with individual programming. Ideal for collectors.

A brand of confidence

SwissKubiK creations meet all the requirements of Swiss watchmaking. This is why the company is recommended by more than twenty Swiss watch companies which it collaborates regularly with.

Intelligent collaboration

In 2017, SwissKubiK joined forces with Scatola del Tempo, the Italian pioneer of watch winders, to expand its product range, create synergies and meet the demands of a growing market. Together, they now offer the best of design and technology.

MASTERBOX

Masterbox wood

Alliance of design and precious wood, such as Macassar, Sycomore or Wenge, to reflect the quality and excellence of the SwissKubiK mechanism.

Masterbox aluminium

Flagship product of the Masterbox range since the beginning, the aluminium finish offers new shades for its 10 years anniversary: a 13-colours palette to create a perfect harmony between the watch and its case.

Masterbox leather

Elegant and masculine, our Masterbox collection has everything going for it: its Toledo leather casing, renowned for its exceptional quality, is available in several timeless shades. A Kubik with a unique natural touch, whose casing acquires a unique patina over time to reveal all its beauty. A true collectible item, to choose with white topstitch or tone on tone.

INNOVATION FOR TRADITION...

Once again, 2019 is marked by innovation for SwissKubiK. The company launches its first watch winders equipped with the latest Bluetooth technology.

By means of a dedicated application that automatically recognises the SwissKubiK watch winders, the owner is able to:

- program his or her watch winder(s) remotely,
- adjust the light,
- check the condition of the batteries,
- individually program each watch winder in case of multiple watch winders,
- give a name to each winder according to the watch,
- save and preserve the batteries which will only work when the watch winder is activated by the application.

Bluetooth connection with phones offers a customization of the program

QR code to download the Bluetooth application.

OPTIONS

Personalisation

For our made-to-order experience, SwissKubiK offers to its customers the possibility to personalize their own watch-winder. We are able to offer such service by combining our Swiss Made legendary quality and the latest UV printing or laser technology. Once you have found the perfect model, you just have to choose the finish you love, the color that will make a difference, the technology to personalize your watch-winder and so on...

Window protection

As an option for each of the KubiK models, the window protection enables an optimal conservation for each watch.

TRAVELBOX

For those who like to take their watches on the road while preserving them, we've created Travelbox!

Travelbox is both a storage case and a rotating case.

Travelbox follows you on all your trips. Your watch is protected during transport in its dedicated spot and doesn't move. Once arrived at your destination, you just have to take out your watch and its cushion to place them on the winding part and activate your Travelbox. Thereby, the watch you don't wear is always on time and maintained wherever you are in the world, regardless of your travel conditions. And of course, Travelbox offers SwissKubiK quality with a 100% Swiss Made box.

Travelbox is available in different materials and colours.
