

WHAT YOU VALUE
DESERVES TO BE
CARED FOR

YOUR TIMEPIECES DESERVE TO BE LOOKED AFTER

It is the thought that counts...

It is acknowledged that even complicated automatic mechanical watches operate on a simple principle: the movements of the person who is wearing the watch allow the oscillating weight to rotate and, in doing so, to rewind the movement. As long as the watch is being worn, the movement rewinds automatically. If the watch is not worn, the power reserve - 40 hours in most cases - runs out and the movement stops. If the stoppage time is prolonged, the lubricants can dry out, which in turn can cause the gear train to seize so altering the good functioning of the watch.

Complication: attentions...

The mechanism of the perpetual calendar, for example, has a mechanical memory that allows it to automatically go from 28th, 30th or 31st of the month to the 1st of the following month. The same applies to leap years, that is to say every four years; the date passes from 29 February to 1 March by "jumping". The only manual adjustment required must be made during the years 2100 and 2400, which exceptionally are non-leap years. If the movement stops, restarting the mechanism requires an in-depth knowledge of watchmaking. That is why a complicated watch must always be in motion.

Maintenance and transmission

The precise and regular maintenance of your timepiece makes it possible to protect the investment it represents in a possible transmission perspective.

PROTECT. MAINTAIN. ENHANCE.

In order to preserve the value you attach to your timepiece, it is advisable to conjugate three verbs in the present tense.

Protect

When a timepiece is not worn, the easiest way to protect it from shocks, scratches, water, dust, etc. is its case or its watch winder. Regular cleaning is also a good protection against daily aggression or the passage of time.

Maintain

If the watch is not worn regularly, it is advisable to place the timepiece in a watch winder. In addition, a regular inspection of the seal by an authorised watchmaker guarantees it functions properly and maintains its value.

Enhance

Sophisticated system of great precision, an automatic watch is also a beautiful piece of work that we like to wear and admire. Apart from your wrist, what better place to highlight it than a watch winder ?

THE WATCH WINDER: IT TURNS HEADS.

At home or on the move, placing your automatic watch in a watch winder makes it possible to protect it, to maintain it by keeping it always on time and to enhance it. This is all the more justified if the owner owns several watches or watches with complications. Some programmable watch winders allow to set the winding time and the number of revolutions, the speed and the direction of rotation for an optimal setting according to the timepiece.

Thanks to its invented, proven and recognised technologies, Scatola del Tempo offers a wide range of watch winders designed and assembled in Italy, certain components being manufactured in Switzerland.

Watch winders for connoisseurs

The Scatola del Tempo watch winders meet the highest standards, so as to better meet those of a clientele of connoisseurs.

Therefore, each watch winder features:

- a Swiss motor with magnetism reduced to a minimum,
- an ultra-silent system,
- a programming system making it possible to define the number of revolutions according to the models,
- the counting of the revolutions,
- up to three years of battery life for the new Rotor-One models, thanks to a Swiss motor and a low-energy electronic circuit.

In addition, our watch winders are particularly appreciated for:

- their irreproachable quality, thanks to an assembly being entirely carried out by hand by our teams and a quality control carried out on each piece,
- their unique mounting system allowing to replace in one gesture the external structure, to change style at will, but also to modify the mechanical parts,
- their timeless design that comes in multiple variations of materials and colours.

YOUR TIMEPIECE MERITS A MADE-TO-MEASURE WATCH WINDER.

To meet all your expectations, the Scatola del Tempo watch winders come in a variety of materials - leather, silk and wood -, colours and combinations of watch winders. The customisation includes new materials and the printing of patterns, logos or photos on any type of material, whether UV, hot stamping or laser engraving, and all this on the entire range.

The idea of limit is not part of our DNA. To surprise and seduce the most enlightened amateurs, we now create fully-customised furniture in the rarest, most valuable or most innovative materials. Together with interior designers and architects, we even design spaces that can be integrated into walk-in wardrobes, bedrooms, living rooms and secure rooms or safes.

R&D: the origin of excellence

Innovation is essential to create unique products that meet the needs of a demanding private clientele. In the same way, we collaborate with the biggest Swiss watchmaking companies to integrate our motors in their watch winders. That is why we have been constantly improving our rotation and programming systems for the last 30 years.

Strong ecological awareness

In order to limit its carbon footprint, all Scatola del Tempo suppliers have been selected within a radius of 50 kilometers around its manufacture of Como (Italy).

**Passion first and foremost**

1990. Scatola del Tempo was created near Como, Italy, on an idea from a passionate engineer and collector, Sandro Colarieti who could not find watch winders for his timepieces. He made one himself. The patent was filed and success followed immediately.

Offer (quality) and demand (spontaneous)

The first models were made entirely by hand by the best local craftsmen in high-quality leather and silk. The very first series soon created a large and spontaneous demand. Thirty years on, Scatola del Tempo is recognised on the five continents.

Exclusive design

The piece is designed with a "deep" knowledge of the contents: structure covered with absorbent material, structured interior shapes for almost all watches, transport without pressure or risk for movements. The exterior is of great refinement: cow leather or varnished Macassar wood, clasps and silver-plated zippers for a long life.

Revolutionary technology

The Scatola del Tempo technology is revolutionary for two reasons: it was the first of its kind and created the very concept of the watch winder. The Swiss high-precision micro-motor is controlled by an exclusive microprocessor. The rotation is carried out in both directions to rewind any automatic movement. When the watch winder is not connected to the mains, two alkaline batteries can provide up to three years of autonomy for the new Rotor-One models.

Made in Switzerland, assembled in Italy

While some components and mechanisms are manufactured in Switzerland, the assembly of all models - as well as the quality control of materials and mechanical parts - is carried out in Italy.

Qualities that stand the test of time

Low consumption, minimal-magnetic-field reduction and exceptional reliability over time: the three qualities of the Scatola del Tempo watch winders have not changed since their creation in 1990.

Swiss watchmaking

First company to offer collectors this type of accessory, both beautiful and practical, Scatola del Tempo has been collaborating with many Swiss watchmaking companies, such as Patek Philippe since 1992.

Intelligent collaboration

In 2017, Scatola del Tempo joined forces with SwissKubiK, a Swiss brand of watch winders, to expand its product range, create synergies and meet the demands of a growing market. Together, they now offer the best of design and technology.

Rotor-One
Black

ROTOR-ONE

The Rotor One comes in 7 bright leather colours. Its exterior cover has a Softtouch finish, pleasant to the touch, integrating a Swiss Made mechanism for beautiful watches lovers. This model functions solely on batteries and offers a minimum autonomy of 3 years.
